A musical world without wires!

Portable audio devices have changed the way we listen to music. Phones and tablets are now our primary music source. But for audiophiles who are looking for astounding audio quality without the inconvenience of running wires there are only small carry-on to mid-sized portable speakers available. That is why we developed the P9, a high-end wireless speaker with an amazing performance.

The P9 stands for a contemporary timeless look thanks to the use of durable and luxurious materials. Both discrete and highly decorative, will blend perfectly with all styles of interior and exterior decoration. Stylish grill made of multi-filament polyester yarn with a soft look to create a natural material effect. Elegant powder-coated die cast aluminum handle with matching extruded trims. Weatherproof design (IPX4).
