

Power

High performance power cables to complement your system

Available in all three Tellurium Q® families of sound.

Ultra Blue Power Cable

Product code: UBU-PWR

The Ultra Blue Power cable is a star performer and you will find that it can be mixed into your system with the Black power cable, as they have been designed to complement one another. Being particularly beneficial for the front end equipment such as DACs, leaving the Black to deal with the drivers such as your integrated amps, power amps and mains conditioners etc.

An all round star performer for the price.

Options: Available with either Shuko (EU), US, AUS or UK power connectors.

Black Power Cable

Product code: BK-PWR

The Black power cable is something of a star performer across all hifi equipment. Being the grown up big brother of the Blue power cable, which was the power cable of the Year 2012 in HiFi World, you can imagine that it does everything that the Blue does but just that bit better. Again, like all our cable products, it improves with burn in - sometimes as a step change in performance in the case of the Black power cable.

Having been designed and built from scratch, not an adapted OEM product, this truly gives a power performance that your equipment will appreciate.

Options: Available with either Shuko (EU), US, AUS or UK power connectors.

Ultra Silver Power Cable

Product code: US-PWR

Even cleaner, more focused and more agile sound than the award winning Black power cable with more precise bass definition and top end. Equipment sounds like there is more headroom and energy in the music.

New cable architecture, including enhanced double layered screening, have allowed a leap forward in performance.

"Tellurium Q is on the intriguing path of discoveries that resulted in an array of cable products that are pushing the art further. The Ultra Silver cable is certainly a great alternative among power cable offerings. How to combine all the technical requirements along with subjective demands, in one organic fashion, is a mystery to me. However, some audio designers just seem to get these things right and some...they just don't. Tellurium Q certainly joins the former, that I can assure you. After the burn-in phase it begun to show its strengths in many areas. A bit closed-in sounding before break-in but completely relaxed, open and transparent after the initial phase. It certainly brought a greater sense of unimpeded energy flow than some other power cables from the batch. Building on a strong and firm bass fundament, the lower midrange was seamlessly integrated into this picture, possessing weight, power, control and natural harmonic structure (tonal colors). The vocal range was free of any overly exposed sibilants but still very open and clear. The treble region was exceptionally smooth, transparent and resolute."

- Matej Isak, Mono & Stereo

Options: Available with either Shuko (EU), US, AUS or UK power connectors.
